

FOOD ORDERING SYSTEM IN C LANGUAGE

INTRODUCTION:

Food Ordering System is based on the concept of ordering food. In this project, we are going to make a programme that focuses on customer section where the user will input customer order from the given selection or menu with a corresponding value, customer order quantity, customer name and mobile number.

This mini project contains limited features, but essential ones. Its main feature includes: ordering snacks, adding customer details, and viewing recent orders.

SOFTWARE & TOOLS:

The software used to run the programme is **C**.

The tools which are used in this project are:

- Conditional statements
- Switch statements
- Loops
- Functions
- Arrays
- Header file
